

CHECKLIST FOR THE RV & THINGS TO REMEMBER

- 1 **Pre Checks:** Always walk around the RV before movement to ensure that you have nothing attached; propane is turned off; all functions inside the RV are turned off; all compartments inside and out are shut; slide out is in; tires and spare are inflated to the proper PSI; awning stowed and locked and the door is locked on the RV for the trip. **(NOTE: Don't forget to put the stairs up in the travel configuration).**
- 2 **Propane Tanks:** The propane tanks must have propane in them and turned on to operate the heater, stove, refrigerator and hot water heater.
- 3 **Air Conditioner:** You will need electric power or have a generator in order for the air conditioner to work.
- 4 **Refrigerator:** When hooked up to electricity, turn your refrigerator to auto. If you are not hooked up to electricity you will need to turn it to gas. It may take a couple of hours to get cold. **NOTE: If the RV is not level, propane will not work.**
- 5 **Pilot Light:** Turn the oven knob to Pilot, press the oven knob **in** and hold the lighter under the orifice below the oven shelf until the pilot lights.
- 6 **Hot Water:** The switch for the hot water tank is on the panel to the left as you walk in the door. Light will stay on until pilot light lights; ensure you have turned on the propane prior to starting water heater. It will take about a half an hour for the water to heat up.
- 7 **Water:** If you are **not** hooked up to city water you will need to fill the fresh water tank. The tank will hold up to and over 50 gallons of water. Make sure the water pump is on inside of the camper when not hooked up to a water source.
- 8 **Toilet:** Be sure to run water in the toilet for at least 30 seconds prior to use. When you are returning home, after you dump add 1-2 gallons of clean water and sanitary packet down the toilet. This helps clean the holding tank while the trailer is in motion.
- 9 **Smoking & Pets:** There is no smoking or pets allowed in RV's. **(No Exceptions)**
